

AresX™ Indoor Jamming System

Indoor Low Power Photo-Frame Smart Detective Jamming

AresX™ Photo-Frame Detective jamming is based on the traditional cellphone jammer, painting style jammer HK-DJ7 is designed with a smart detective jamming system. When the mobile phone is incoming or outgoing, HK-DJ7 interferes the signals between the mobile phone and BTS to prevent the phone from communicating with the outside, otherwise, the device will be in sleep mode.

This unique design creates a more coverage and less power consumption and green purpose.

Features & Advantages

Support RS232 Com port, controlled by the computer. Output power of each and can be adjusted by computer.

Infrared remote control available to ON/OFF the device in a range of 0-10M

Time interval for shielding can be reconfigured.

With internal antenna. Highly covert and wall mounted. It can be looked completely like a phone frame hung on the wall. Photo frame can be selected as required.

With LED light to display device's startup and indicate the current time.

With separate detecting and shielding LED light for each band.

SPECIFICATION

Jamming Frequency	700-2700MHz
Detecting Sensitivity	-85 dBm. 30 different grades optional
Output Power	2-3W/band, total output power up to 15W
Detecting Range	1-25M (up to 100m for GSM system)
Antennae Type	internal antenna of 3dBi
Programming mode	detecting jamming sleeping cycling
Shielding Time (every time)	0-300 seconds optional, factory default by 100 seconds
Longest Continuous Shielding Time	250 seconds (each second stepping)
Detective Sleep Time	0-60 seconds optional, factory default by 20 sec.
Net Weight	2.5kgs
Size	660 * 460 * 78mm
